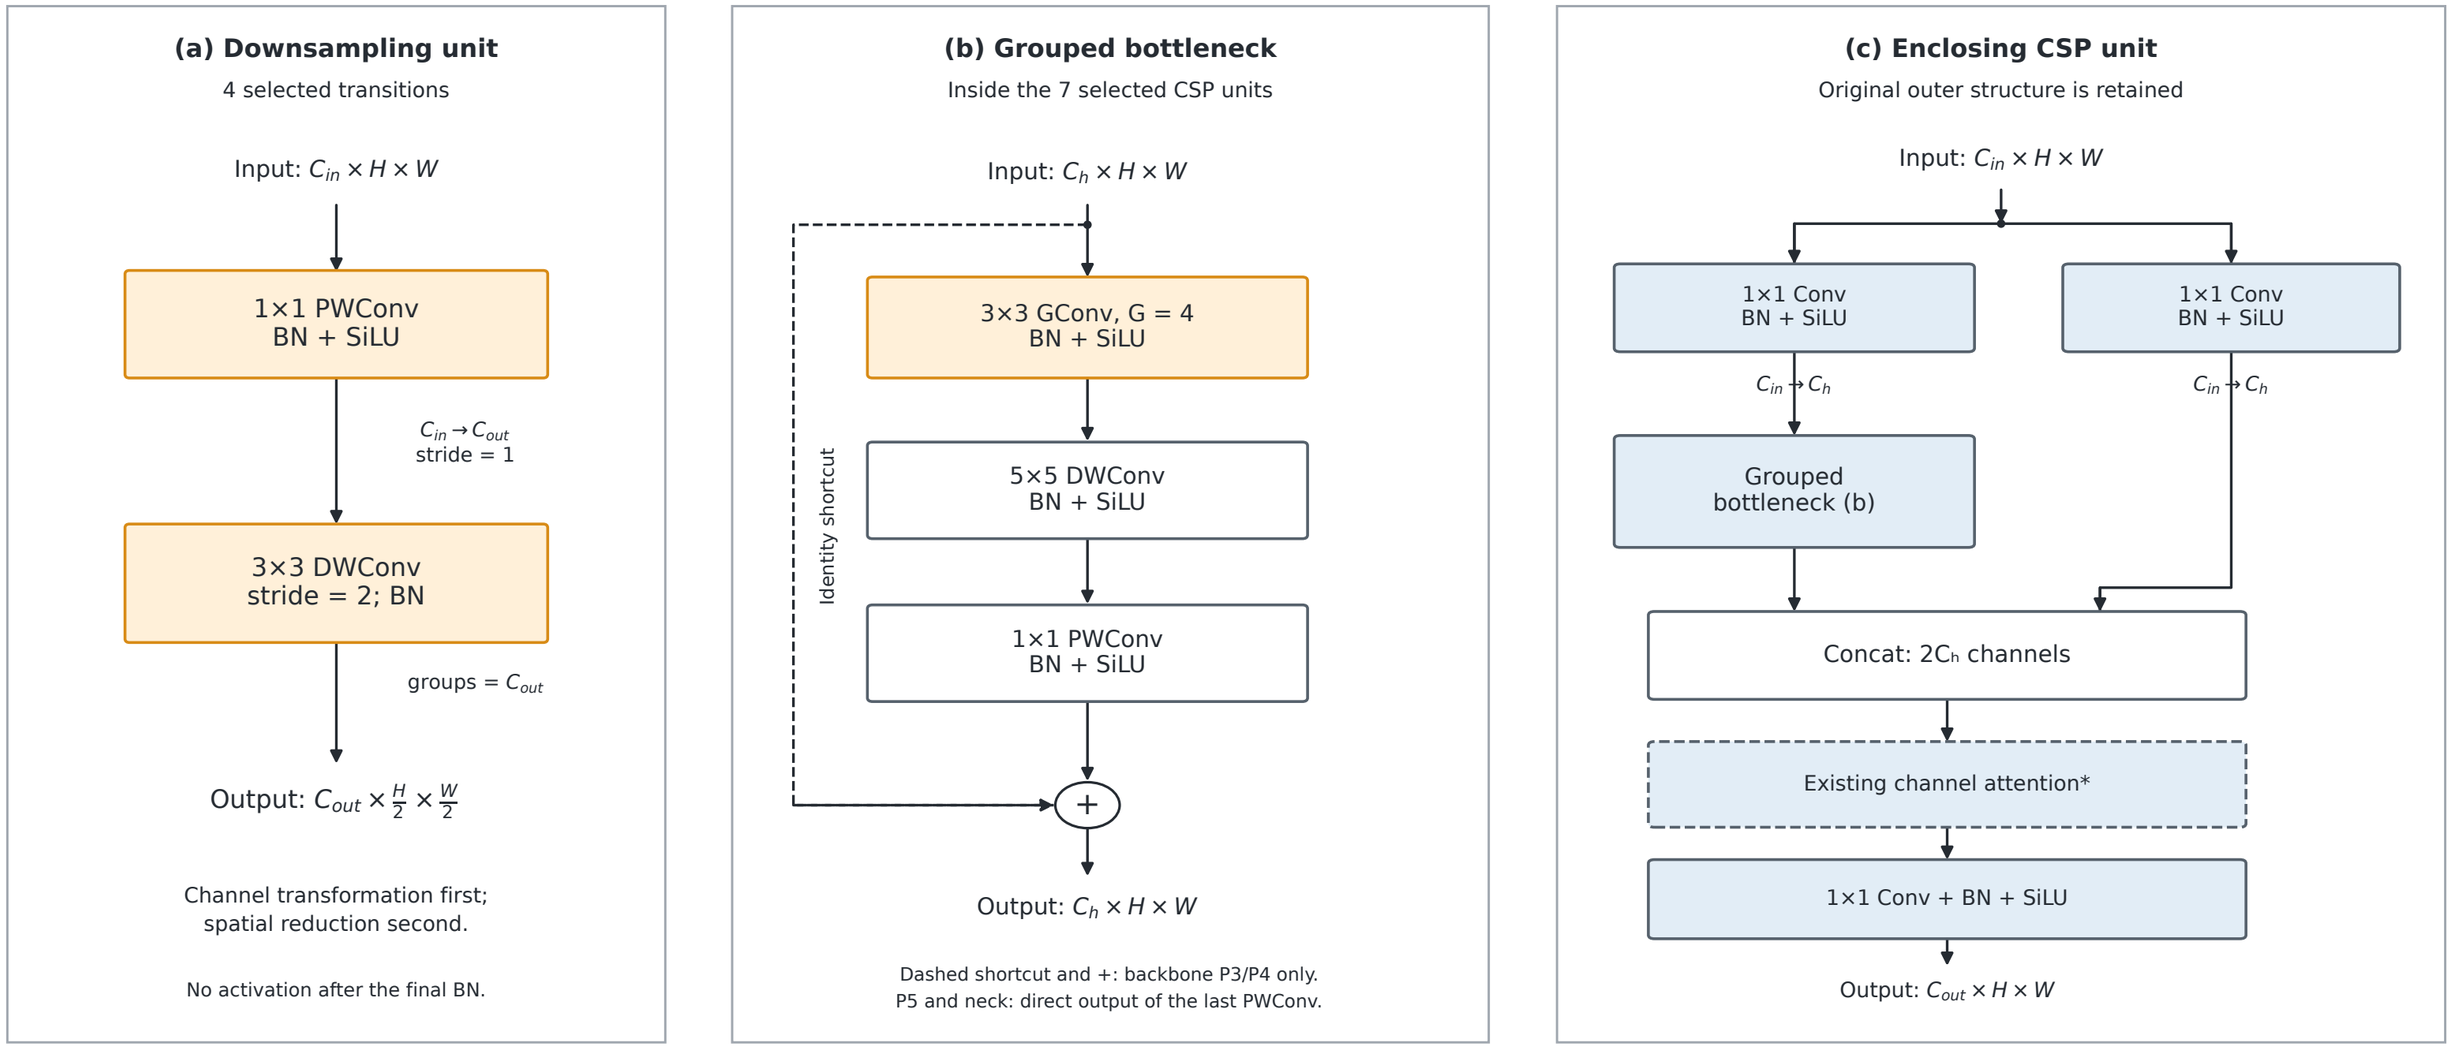
GSCE: Grouped Spatial–Channel Encoding



Orange = replaced operators. Blue = retained outer organization; white = retained operators. PW = pointwise; DW = depthwise; GConv = grouped convolution.

* Channel attention in (c): backbone only; omitted in neck. C_h = C_out / 2. The two CSP branches are learned projections, not a raw channel split.

Panels (a) and (c) are placed at different network locations; they are not a universal serial chain. All arrows follow the current implementation.
